### Summary

Solar filter holder for skywatcher 10" dob.

[Learning](#) > [Physics & Astronomy](#)

Ideally print in ASA. **Always check your baader sheet before observation.**

**Solar observing needs special care, act responsibly.**

The retaining rings are a bit too small and need to be heated and forced on the spider screws. This is intended and by design. Add a drop of CA glue afterwards !

Use 4 strong rubber bands to secure the filter to the newly created hooks on the spider screws.
